

What if you could move innovation forward, faster?

You can—with InnovationQ+, powered by IP.com and IEEE.

Our pioneering innovation and IP decision support workflow solution, InnovationQ+, is the go-to for entities looking to unlock next-level agility and efficiency.

Industry-unique integration of fully searchable IEEE and One Petro content with our Semantic AI engine enables faster, better-informed, ROI-driving decision making throughout the innovation lifecycle so you can:

Amp up productivity

Unlock better results

Own the advantage

Move innovation forward, faster.

InnovationQ+

Advance the creation, management and monetization of more powerful, defensible IP with the InnovationQ+ workflow solution. InnovationQ+ simplifies traditionally time-consuming, cost-intensive search processes with our Semantic AI engine and unprecedented data integration, making it easier, faster and more cost-effective to innovate.

Unlock better results with accelerated intelligence.

An elegantly simple interface with leading-edge automated visuals and insight-rich outputs help you uncover relevant information faster than other alternatives.

Avoid traditional search hassles

Search the way you want to. Searches can be initiated using a patent number, a conceptual statement or an invention disclosure excerpt, making it easy for anyone—even new users—to unlock expert-level results.

Visualize where you're going

Create a customizable visualization dashboard to focus on what matters most to you. Use the Widgets module in HD-Analyze mode to accelerate discovery and drill down on critical data.

Get to market faster

Rank and prioritize ideas ultra-efficiently with automated Technology Vitality Reports. Quickly review hundreds of invention disclosures to fast-track the most novel ideas. Drill down into Prior Art details, competitive landscape insights, recent filing trends and more with the click of a button.

Superior search productivity.

An intuitive user experience wrapped around our powerful Semantic AI engine eliminates the complexities involved with other tools, dramatically decreasing time to proficiency and patentability. Our proprietary engine blends a natural language semantic search with classic Boolean query capabilities, giving users a unique “discover, capture and drill down” workflow that rapidly targets relevant results.

Comprehensive data and unrivaled insights.

Our proprietary Semantic AI engine aggregates billions of global IP data points from patent and non-patent literature, including fully searchable IEEE and One Petro content. A five-star relevance rating system is used to elevate the results that most closely align to your search concept.

NEW Hyper-Dynamic Analyze Mode (HD Mode) makes it faster and easier to evaluate and pivot complex IP data from a number of vectors, in real-time, enabling rapid landscape analysis. HD Mode expands on the popular visual controls in InnovationQ+, providing more power with simple, seamless navigation.

A new industry first.

The new Synopsis AI feature enables a user to instantaneously summarize complex patent and non-patent literature at the click of a button.

Better, faster decision-making.

Tap into one of the industry's broadest portfolio of C-suite-ready reports so you can better target R&D investments—and secure competitive advantage. Our reports support better business decisions by:
